

# Contiflow

## Sampling System for liquids or solids

DIN-EN: DN 15 – 100 / PN 10 – 40

ASME: NPS ½" – 4" / class 150 – 300

PT range:  $-40 < T < 230^{\circ}\text{C}$ , vacuum  $10^{-8}$  mbar

## Design Features

### Design Characteristics

- free of cavity
- closed system
- maintenance free – self lubricating
- pressureless sampling
- defined representative sample quantity (25ml)
- piggable
- no flow interruption
- simple and foolsafe handling
- sampling in vacuum possible
- fugitive emission resp. clean air act certified (TA – Luft 2002 approval)
- Directive 2014/68/EU

### Functional Principle

### Design variations

- CONTIFLOW = Sampling plug valve with PTFE sleeve
- CONTIFLOW TRF = Sampling plug valve with lined plug (pharmaceutical cip competent)
- CONTIFLOW TRF-A = Sampling plug valve with lined body and plug (pharmaceutical cip competent)

### Bottle connection

- PTFE-Adapter: for laboratory bottle with ISO-thread GL 32/45. Application: For less toxic resp. polluted media.
- Clamping Retainer: For fast and easy exchange of laboratory bottle, even for heated version.
- Needle system: closed needle system for laboratory bottle with septum (Butyl and PTFE). Needle System NH and NH-S with diverse internal diameter (2-6 mm). Application for high toxic resp. polluted media for spillning eliminated an contamination free sampling.

### PT-Diagram

General Pressure-Temperature-Diagram

**Operating temperatures  $< -30^{\circ}\text{C}$  and  $> 220^{\circ}\text{C}$  have to be checked and approved by AZ according to the operating conditions.**

Besides the P/T value of the sleeve the limitations of the valve bodies also have to be considered. Please refer to the EN 12516-1 resp. ASME B16.34 in order to choose a proper pressure rating (PN/class). The shown values refer to austenitic stainless steel 1.4408 (A351 Gr. CF8M).

- 1) For operating temperatures below  $-10^{\circ}\text{C}$  low temperature / austenitic steels are required.
- 2) Sleeve: There are different sleeve materials / compounds available.
